Empathy Map

Create an empathy map to understand your customer/user from four perspectives - what they Say, Think, Do, and Feel - in relation to the problem your project addresses. This helps the team build a customer-centric solution.

SAYS • "It takes too long to read through all these student emails before responding." • "I'm afraid I'll miss a student who is truly overwhelmed and give them the wrong tone." • "We need to make our triage process more efficient and standardized across the team."	THINKS • "Did I correctly guess the emotion behind this student's short message?" • "How can I provide the same level of support to everyone when I'm so pressed for time?" • "A system that could help with mixed-emotion analysis would improve my decisions."
PERSONA NAME Aaliyah Khan <i>Teaching Assistant & Academic Mentor</i>	
DOES • Copies student concern text to paste into an AI tool for emotion classification. • Reviews AI-suggested guidance based on a student's identified emotion (e.g., Frustrated). • Collaborates with academic support teams to accelerate intervention triage and consistency.	FEELS • Frustrated when unable to quickly decipher a student's specific academic challenge. • Anxious about maintaining consistent empathy and support when facing a high volume of requests. • Relieved when a supportive, field-specific reply is generated efficiently by an AI assistant.
