

Customer Journey Map

Date	01 July 2026
Team ID	xxxxxx
Project Name	Emotion Detection & Learning Support Engine
Maximum Marks	2 Marks

Customer Journey Map

Map out the customer's experience stage-by-stage, capturing their actions, touchpoints, thoughts, and feelings, along with process ownership and improvement opportunities at each stage.

Phase of Journey	Stage 1	Stage 2	Stage 3
Actions <i>What does the customer do?</i>	•Opens the support engine or learning platform interface. •Pastes or types a detailed concern regarding a difficult academic topic (e.g., "I'm completely lost on recursion"). •Submits the text to receive instant automated support.	•Views the live classification of underlying emotions and specific confidence metrics. •Compares dual-model assessment indicators (BiLSTM vs BERT outputs). •Reads through the automatically generated, domain-specific guidance recommendations.	•Applies the suggested structured next steps and tailored clarity exercises to overcome the bottleneck. •Self-reflects on mixed-emotion feedback insights (e.g., Curious + Confused indicators). •Saves the interaction history to monitor learning pace and concept mastery progress.
Touchpoint <i>What part of the service do they interact with?</i>	•Streamlit User Interface. • Student text concern description input box. • Submission trigger	• Emotion classification summary board. • Confidence level highlight indicators & dual-model comparison toggle	• Actionable advice and direction cards. • Mixed-emotion self-reflection visualization tool. • Historical progress logs & interaction

	button.	panel. • Automated, field-specific suggested response block.	save dashboard.
Customer Thought <i>What is the customer thinking?</i>	• "Can this tool genuinely interpret how confused or frustrated I am from just a text prompt?" • "Will typing out my problem here get me standard automated text or a truly supportive, custom answer?"	• "The system correctly identified that I'm both anxious and confused about this coding assignment." • "Seeing how both models classified my text gives me high trust in these guidance tips."	• "These targeted steps are exactly what I need to clear my roadblock without waiting for office hours." • "Having this saved in my history makes it much easier to track my learning trends over time."
Customer Feeling <i>What is the customer feeling?</i>	Confused & Frustrated	Relieved, Valued & Reassured	Encouraged, Empowered, and Optimistic
Process Ownership <i>Who is in the lead on this?</i>	User / Frontend Input System	AI Engine / Core Backend Classification Module (BiLSTM & BERT Models)	Analytics Module / Interaction Database & Progress Tracking System
Opportunities	• Integrate seamless speech-to-text input dictation for students.	• Fine-tune the BERT architecture to identify highly specific, subtle technical anxieties.	• Build a predictive visualization dashboard forecasting where a student might struggle next.
